### DIAM Munich: W-FILTER shows presence!

**Speyer, September 2014** – "Grias god" - this is how the visitors of the DIAM - Deutsche Industriearmaturen Messe have been welcomed for the first time in Munich from 14.-15. September 2014.

Professional visitors from Germany, Austria, Switzerland and bordering countries found their way to the W-FILTER booth on the DIAM. Besides the horizontal installation possibility, also the vertical capability of the strainers Filter Type W has been displayed to the audience.

„We are very pleased about the lively inflow of the public on our booth and the technical discussions with the qualified visitors who had been interested in the advantages of our strainers“, summarized Dirk Waldow the quality of the exhibition, who is managing the company W-FILTER in second generation.

The family business was founded in the year 1980 by Guenter Waldow with the main emphasis on suitable filters for standard and special applications.

The founder describes his positive impressions:

„During recent years, we can see in increasing focus by plant engineers and operators on the requirement of strainers with low flow resistance and hence the resulting high energy efficiency combined with reduced frequency of cleaning and quicker handling.“ All this features distinguish the Filter Type W and the complete product portfolio in the nominal sizes DN50-1000 and pressure ratings PN10-100.

“Due to the permanent improvement of our products during the last decades, we are nowadays offering professional solutions for a variety of applications. The successful marketing in different industry sectors worldwide is guaranteed by my Son“, added Guenter Waldow about the good future prospects.

Learn more about our competence in your future projects by increasing plant and energy efficiency.
